I2C and SPI driver for the Bosch BME280 Temperature, Humidity, and Barometric Pressure sensor

CHAPTER 1

Installation and Dependencies

This driver depends on:

- Adafruit CircuitPython
- Bus Device

Please ensure that the driver and all dependencies are available on the CircuitPython filesystem. This can be most easily achieved by downloading and installing the latest Adafruit library and driver bundle on your device.

1.1 Installing from PyPI

On supported GNU/Linux systems like the Raspberry Pi, you can install the driver locally [from PyPI](#). To install for current user:

```
pip3 install adafruit-circuitpython-bme280
```

To install system-wide (this may be required in some cases):

```
sudo pip3 install adafruit-circuitpython-bme280
```

To install in a virtual environment in your current project:

```
mkdir project-name && cd project-name
python3 -m venv .env
source .env/bin/activate
pip3 install adafruit-circuitpython-bme280
```

CHAPTER 2

Usage Example

```
import board
import digitalio
import busio
import time
import adafruit_bme280

# Create library object using our Bus I2C port
i2c = busio.I2C(board.SCL, board.SDA)
bme280 = adafruit_bme280.Adafruit_BME280_I2C(i2c)
#or with other sensor address
#bme280 = adafruit_bme280.Adafruit_BME280_I2C(i2c, address=0x76)

# OR create library object using our Bus SPI port
#spi = busio.SPI(board.SCK, board.MOSI, board.MISO)
#bme_cs = digitalio.DigitalInOut(board.D10)
#bme280 = adafruit_bme280.Adafruit_BME280_SPI(spi, bme_cs)

# change this to match the location's pressure (hPa) at sea level
bme280.sea_level_pressure = 1013.25

while True:
    print("\nTemperature: %0.1f C" % bme280.temperature)
    print("Humidity: %0.1f %%" % bme280.humidity)
    print("Pressure: %0.1f hPa" % bme280.pressure)
    print("Altitude = %0.2f meters" % bme280.altitude)
    time.sleep(2)
```

CHAPTER 3

Contributing

Contributions are welcome! Please read our [Code of Conduct](#) before contributing to help this project stay welcoming.

CHAPTER 4

Documentation

For information on building library documentation, please check out [this guide](#).

CHAPTER 5

Table of Contents

5.1 Simple test

Ensure your device works with this simple test.

Listing 1: examples/bme280_simpletest.py

```
1 import time
2
3 import board
4 import busio
5 import adafruit_bme280
6
7 # Create library object using our Bus I2C port
8 i2c = busio.I2C(board.SCL, board.SDA)
9 bme280 = adafruit_bme280.Adafruit_BME280_I2C(i2c)
10
11 # OR create library object using our Bus SPI port
12 # spi = busio.SPI(board.SCK, board.MOSI, board.MISO)
13 # bme_cs = digitalio.DigitalInOut(board.D10)
14 # bme280 = adafruit_bme280.Adafruit_BME280_SPI(spi, bme_cs)
15
16 # change this to match the location's pressure (hPa) at sea level
17 bme280.sea_level_pressure = 1013.25
18
19 while True:
20     print("\nTemperature: %0.1f C" % bme280.temperature)
21     print("Humidity: %0.1f %%" % bme280.humidity)
22     print("Pressure: %0.1f hPa" % bme280.pressure)
23     print("Altitude = %0.2f meters" % bme280.altitude)
24     time.sleep(2)
```

5.2 adafruit_bme280 - Adafruit BME280 - Temperature, Humidity & Barometric Pressure Sensor

CircuitPython driver from BME280 Temperature, Humidity and Barometric Pressure sensor

- Author(s): ladyada

```
class adafruit_bme280.Adafruit_BME280
```

Driver from BME280 Temperature, Humidity and Barometric Pressure sensor

altitude

The altitude based on current pressure versus the sea level pressure (`sea_level_pressure`) - which you must enter ahead of time)

humidity

The relative humidity in RH % returns None if humidity measurement is disabled

iir_filter

Controls the time constant of the IIR filter Allowed values are the constants `IIR_FILTER_*`

measurement_time_max

Maximum time in milliseconds required to complete a measurement in normal mode

measurement_time_typical

Typical time in milliseconds required to complete a measurement in normal mode

mode

Operation mode Allowed values are the constants `MODE_*`

overscan_humidity

Humidity Oversampling Allowed values are the constants `OVERSCAN_*`

overscan_pressure

Pressure Oversampling Allowed values are the constants `OVERSCAN_*`

overscan_temperature

Temperature Oversampling Allowed values are the constants `OVERSCAN_*`

pressure

The compensated pressure in hectoPascals. returns None if pressure measurement is disabled

relative_humidity

The relative humidity in RH % returns None if humidity measurement is disabled

sea_level_pressure = None

Pressure in hectoPascals at sea level. Used to calibrate `altitude`.

standby_period

Control the inactive period when in Normal mode Allowed standby periods are the constants `STANDBY_TC_*`

temperature

The compensated temperature in degrees celsius.

```
class adafruit_bme280.Adafruit_BME280_I2C(i2c, address=<sphinx.ext.autodoc.importer._MockObject  
object>)
```

Driver for BME280 connected over I2C

```
class adafruit_bme280.Adafruit_BME280_SPI(spi, cs, baudrate=100000)
```

Driver for BME280 connected over SPI
