CircuitPython driver for the [CCS811](#) air quality sensor.

CHAPTER 1

Dependencies

This driver depends on:

- Adafruit CircuitPython
- Bus Device
- Register

Please ensure all dependencies are available on the CircuitPython filesystem. This is easily achieved by downloading the Adafruit library and driver bundle.

CHAPTER 2

Installing from PyPI

On supported GNU/Linux systems like the Raspberry Pi, you can install the driver locally [from PyPI](#). To install for current user:

```
pip3 install adafruit-circuitpython-ccs811
```

To install system-wide (this may be required in some cases):

```
sudo pip3 install adafruit-circuitpython-ccs811
```

To install in a virtual environment in your current project:

```
mkdir project-name && cd project-name  
python3 -m venv .env  
source .env/bin/activate  
pip3 install adafruit-circuitpython-ccs811
```

CHAPTER 3

Usage Notes

See the guide for wiring and installation instructions.

Of course, you must import the library to use it:

```
import busio
import adafruit_ccs811
```

Next, initialize the I2C bus object.

```
from board import *
i2c_bus = busio.I2C(SCL, SDA)
```

Once you have created the I2C interface object, you can use it to instantiate the CCS811 object

```
ccs = adafruit_ccs811.CCS811(i2c_bus)
```

3.1 Reading Sensor

To read the gas sensor simply read the attributes:

```
print("CO2: ", ccs.eco2, " TVOC:", ccs.tvoc)
```

CHAPTER 4

Contributing

Contributions are welcome! Please read our [Code of Conduct](#) before contributing to help this project stay welcoming.

CHAPTER 5

Documentation

For information on building library documentation, please check out [this guide](#).

CHAPTER 6

Table of Contents

6.1 Simple test

Ensure your device works with this simple test.

Listing 1: examples/ccs811_simpletest.py

```
1 import time
2 import board
3 import busio
4 import adafruit_ccs811
5
6 i2c = busio.I2C(board.SCL, board.SDA)
7 ccs811 = adafruit_ccs811.CCS811(i2c)
8
9 # Wait for the sensor to be ready
10 while not ccs811.data_ready:
11     pass
12
13 while True:
14     print("CO2: {} PPM, TVOC: {} PPB".format(ccs811.eco2, ccs811.tvoc))
15     time.sleep(0.5)
```

6.2 ccs811 - Adafruit CCS811 Air Quality Sensor Breakout - VOC and eCO2

This library supports the use of the CCS811 air quality sensor in CircuitPython.

Author(s): Dean Miller for Adafruit Industries

Notes:

#. Datasheet

```
class adafruit_ccs811.CCS811(i2c_bus, address=90)
    CCS811 gas sensor driver.
```

Parameters

- **i2c** (`I2C`) – The I2C bus.
- **addr** (`int`) – The I2C address of the CCS811.

`data_ready`

True when new data has been read.

`eco2`

Equivalent Carbon Dioxide in parts per million. Clipped to 400 to 8192ppm.

`error`

True when an error has occurred.

`error_code`

Error code

`reset()`

Initiate a software reset.

`set_environmental_data(humidity, temperature)`

Set the temperature and humidity used when computing eCO2 and TVOC values.

Parameters

- **humidity** (`int`) – The current relative humidity in percent.
- **temperature** (`float`) – The current temperature in Celsius.

`set_interrupt_thresholds(low_med, med_high, hysteresis)`

Set the thresholds used for triggering the interrupt based on eCO2. The interrupt is triggered when the value crossed a boundary value by the minimum hysteresis value.

Parameters

- **low_med** (`int`) – Boundary between low and medium ranges
- **med_high** (`int`) – Boundary between medium and high ranges
- **hysteresis** (`int`) – Minimum difference between reads

`temp_offset = 0.0`

Temperature offset.

`temperature`

Deprecated since version 1.1.5: Hardware support removed by vendor

Temperature based on optional thermistor in Celsius.

`tvoc`

Total Volatile Organic Compound in parts per billion.

CHAPTER 7

Indices and tables

- genindex
- modindex
- search
