CircuitPython helper library for the LIS3MDL 3-axis magnetometer

# CHAPTER 1

---

## Dependencies

---

This driver depends on:

- [Adafruit CircuitPython](#)
- [Bus Device](#)
- [Register](#)

Please ensure all dependencies are available on the CircuitPython filesystem. This is easily achieved by downloading the [Adafruit library and driver bundle](#).

## CHAPTER 2

---

### Installing from PyPI

---

On supported GNU/Linux systems like the Raspberry Pi, you can install the driver locally [from PyPI](#). To install for current user:

```
pip3 install adafruit-circuitpython-lis3mdl
```

To install system-wide (this may be required in some cases):

```
sudo pip3 install adafruit-circuitpython-lis3mdl
```

To install in a virtual environment in your current project:

```
mkdir project-name && cd project-name  
python3 -m venv .env  
source .env/bin/activate  
pip3 install adafruit-circuitpython-lis3mdl
```

## CHAPTER 3

---

### Usage Example

---

```
import time
import board
import adafruit_lis3mdl

i2c = board.I2C() # uses board.SCL and board.SDA
sensor = adafruit_lis3mdl.LIS3MDL(i2c)

while True:
    mag_x, mag_y, mag_z = sensor.magnetic

    print('X:{0:10.2f}, Y:{1:10.2f}, Z:{2:10.2f} uT'.format(mag_x, mag_y, mag_z))
    print('')
    time.sleep(1.0)
```

## CHAPTER 4

---

### Contributing

---

Contributions are welcome! Please read our [Code of Conduct](#) before contributing to help this project stay welcoming.

## CHAPTER 5

---

### Documentation

---

For information on building library documentation, please check out [this guide](#).

## 6.1 Simple test

Ensure your device works with this simple test.

Listing 1: examples/lis3mdl\_simpletest.py

```

2 # SPDX-License-Identifier: MIT
3
4 """ Display magnetometer data once per second """
5
6 import time
7 import board
8 import adafruit_lis3mdl
9
10 i2c = board.I2C() # uses board.SCL and board.SDA
11 sensor = adafruit_lis3mdl.LIS3MDL(i2c)
12
13 while True:
14     mag_x, mag_y, mag_z = sensor.magnetic
15
16     print("X:{0:10.2f}, Y:{1:10.2f}, Z:{2:10.2f} uT".format(mag_x, mag_y, mag_z))
17     print("")
18     time.sleep(1.0)
```

## 6.2 Compass Example

Use the magnetometer to calculate compass headings.

Listing 2: examples/lis3mdl\_compass.py

```

2  # SPDX-License-Identifier: MIT
3
4  """ Display compass heading data five times per second """
5  import time
6  from math import atan2, degrees
7  import board
8  import adafruit_lis3mdl
9
10 i2c = board.I2C() # uses board.SCL and board.SDA
11 sensor = adafruit_lis3mdl.LIS3MDL(i2c)
12
13
14 def vector_2_degrees(x, y):
15     angle = degrees(atan2(y, x))
16     if angle < 0:
17         angle += 360
18     return angle
19
20
21 def get_heading(_sensor):
22     magnet_x, magnet_y, _ = _sensor.magnetic
23     return vector_2_degrees(magnet_x, magnet_y)
24
25
26 while True:
27     print("heading: {:.2f} degrees".format(get_heading(sensor)))
28     time.sleep(0.2)

```

## 6.3 Data Rate Example

Test each data rate

Listing 3: examples/lis3mdl\_data\_rate\_test.py

```

2  # SPDX-License-Identifier: MIT
3
4  """ Test Each Data Rate """
5
6  # pylint: disable=no-member
7  import time
8  import board
9  from adafruit_lis3mdl import LIS3MDL, Rate, PerformanceMode
10
11 i2c = board.I2C() # uses board.SCL and board.SDA
12 sensor = LIS3MDL(i2c)
13
14 current_rate = Rate.RATE_155_HZ
15 sensor.data_rate = current_rate
16 start_time = time.monotonic()
17 print("data_rate is", Rate.string[sensor.data_rate], "HZ")
18 print("performance_mode is", PerformanceMode.string[sensor.performance_mode])

```

(continues on next page)

(continued from previous page)

```

19 while True:
20     mag_x, mag_y, mag_z = sensor.magnetic
21
22     print("X:{0:10.2f}, Y:{1:10.2f}, Z:{2:10.2f} uT".format(mag_x, mag_y, mag_z))
23
24     # sleep for enough time so that we'll read the value twice per measurement
25     sleep_time = 1 / (Rate.string[current_rate] * 2)
26     time.sleep(sleep_time)
27
28     # exit loop after a second to prevent hard to stop loops with short delays
29     if (time.monotonic() - start_time) > 1:
30         break

```

## 6.4 LSM6DS Test

Test the LSM6DS device

9
10 i2c = board.I2C() # uses board.SCL and board.SDA
11 sensor = LIS3MDL(i2c)
12
13 while True:
14
15     for mag_range in [
16         Range.RANGE_4_GAUSS,
17         Range.RANGE_8_GAUSS,
18         Range.RANGE_12_GAUSS,
19         Range.RANGE_16_GAUSS,
20     ]:
21         sensor.range = mag_range
22         print("Range: %d Gauss" % Range.string[sensor.range])
23         mag_x, mag_y, mag_z = sensor.magnetic
24
25         print("X:{0:10.2f}, Y:{1:10.2f}, Z:{2:10.2f} uT".format(mag_x, mag_y, mag_z))
26         print("")
27         time.sleep(0.3)

```

## 6.6 adafruit\_lis3mdl

CircuitPython helper library for the LIS3MDL 3-axis magnetometer

- Author(s): Bryan Siepert

### 6.6.1 Implementation Notes

**Hardware:** \* Adafruit Adafruit LSM6DS33 + LIS3MDL - 9 DoF IMU (Product ID: 4485)

**Software and Dependencies:**

- Adafruit CircuitPython firmware for the supported boards: <https://circuitpython.org/downloads>
- Adafruit's Bus Device library: [https://github.com/adafruit/Adafruit\\_CircuitPython\\_BusDevice](https://github.com/adafruit/Adafruit_CircuitPython_BusDevice)
- Adafruit's Register library: [https://github.com/adafruit/Adafruit\\_CircuitPython\\_Register](https://github.com/adafruit/Adafruit_CircuitPython_Register)

**class** `adafruit_lis3mdl.LIS3MDL` (*i2c\_bus*, *address=<sphinx.ext.autodoc.importer.\_MockObject object>*)

Driver for the LIS3MDL 3-axis magnetometer.

**Parameters**

- **i2c\_bus** (*I2C*) – The I2C bus the LIS3MDL is connected to.
- **address** – The I2C device address. Defaults to 0x1C

### Quickstart: Importing and using the device

Here is an example of using the *LIS3MDL* class. First you will need to import the libraries to use the sensor

```
import board
import adafruit_lis3mdl
```

Once this is done you can define your `board.I2C` object and define your sensor object

```
i2c = board.I2C()
sensor = adafruit_lis3mdl.LIS3MDL(i2c)
```

Now you have access to the *magnetic* attribute

```
mag_x, mag_y, mag_z = sensor.magnetic
```

#### **data\_rate**

The rate at which the sensor takes measurements. Must be a *Rate*

#### **magnetic**

The processed magnetometer sensor values. A 3-tuple of X, Y, Z axis values in microteslas that are signed floats.

#### **operation\_mode**

The operating mode for the sensor, controlling how measurements are taken. Must be an *OperationMode*. See the the *OperationMode* document for additional details

#### **performance\_mode**

Sets the ‘performance mode’ of the sensor. Must be a *PerformanceMode*. Note that *performance\_mode* affects the available data rate and will be automatically changed by setting *data\_rate* to certain values.

#### **range**

The measurement range for the magnetic sensor. Must be a *Range*

#### **reset ()**

Reset the sensor to the default state set by the library

#### **class** `adafruit_lis3mdl.OperationMode`

Options for *operation\_mode*

| Operation Mode                        | Meaning  |
|---------------------------------------|--|
| <code>OperationMode.CONTINUOUS</code> | Measurements are made continuously at the given <i>data_rate</i>     |
| <code>OperationMode.SINGLE</code>     | Setting to <code>SINGLE</code> takes a single measurement.           |
| <code>OperationMode.POWER_DOWN</code> | Halts measurements. <i>magnetic</i> will return the last measurement |

#### **class** `adafruit_lis3mdl.Rate`

Options for *data\_rate*

| Rate          | Meaning   |
|---------------|---|
| RATE_0_625_HZ | 0.625 HZ  |
| RATE_1_25_HZ  | 1.25 HZ   |
| RATE_2_5_HZ   | 2.5 HZ  |
| RATE_5_HZ     | 5 HZ  |
| RATE_10_HZ    | 10 HZ   |
| RATE_20_HZ    | 20 HZ   |
| RATE_40_HZ    | 40 HZ   |
| RATE_80_HZ    | 80 HZ   |
| RATE_155_HZ   | 155 HZ ( Sets PerformanceMode to MODE_ULTRA)      |
| RATE_300_HZ   | 300 HZ ( Sets PerformanceMode to MODE_HIGH)       |
| RATE_560_HZ   | 560 HZ ( Sets PerformanceMode to MODE_MEDIUM)     |
| RATE_1000_HZ  | 1000 HZ ( Sets PerformanceMode to MODE_LOW_POWER) |
