CircuitPython driver for the MS8607 PTH sensor

# CHAPTER 1

---

## Dependencies

---

This driver depends on:

- [Adafruit CircuitPython](#)

Please ensure all dependencies are available on the CircuitPython filesystem. This is easily achieved by downloading the [Adafruit library and driver bundle](#).

## CHAPTER 2

---

### Installing from PyPI

---

On supported GNU/Linux systems like the Raspberry Pi, you can install the driver locally [from PyPI](#). To install for current user:

```
pip3 install adafruit-circuitpython-ms8607
```

To install system-wide (this may be required in some cases):

```
sudo pip3 install adafruit-circuitpython-ms8607
```

To install in a virtual environment in your current project:

```
mkdir project-name && cd project-name
python3 -m venv .env
source .env/bin/activate
pip3 install adafruit-circuitpython-ms8607
```

## CHAPTER 3

---

### Usage Example

---

```
from time import sleep
import board
from adafruit_ms8607 import MS8607

i2c = board.I2C()
sensor = MS8607(i2c)

while True:

    print("Pressure: %.2f hPa" % sensor.pressure)
    print("Temperature: %.2f C" % sensor.temperature)
    print("Humidity: %.2f %% rH" % sensor.relative_humidity)
    sleep(1)
```

## CHAPTER 4

---

### Contributing

---

Contributions are welcome! Please read our [Code of Conduct](#) before contributing to help this project stay welcoming.

## CHAPTER 5

---

### Documentation

---

For information on building library documentation, please check out [this guide](#).

## 6.1 Simple test

Ensure your device works with this simple test.

3 from time import sleep
4 import board
5 from adafruit_ms8607 import MS8607
6
7 i2c = board.I2C()
8 sensor = MS8607(i2c)
9
10 while True:
11
12     print("Pressure: %.2f hPa" % sensor.pressure)
13     print("Temperature: %.2f C" % sensor.temperature)
14     print("Humidity: %.2f %% rH" % sensor.relative_humidity)
15     print("\n-----\n")
16     sleep(1)
```

## 6.2 adafruit\_ms8607

CircuitPython driver for the MS8607 PTH sensor

- Author(s): Bryan Siepert

## 6.2.1 Implementation Notes

### Hardware:

- Adafruit’s MS8607 Pressure Humidity Temperature Breakout

### Software and Dependencies:

- Adafruit CircuitPython firmware for the supported boards: <https://github.com/adafruit/circuitpython/releases>
- Adafruit’s Bus Device library: [https://github.com/adafruit/Adafruit\\_CircuitPython\\_BusDevice](https://github.com/adafruit/Adafruit_CircuitPython_BusDevice)
- Adafruit’s Register library: [https://github.com/adafruit/Adafruit\\_CircuitPython\\_Register](https://github.com/adafruit/Adafruit_CircuitPython_Register)

**class** `adafruit_ms8607.CV`

struct helper

**classmethod** `add_values` (*value\_tuples*)

Add CV values to the class

**classmethod** `is_valid` (*value*)

Validate that a given value is a member

**class** `adafruit_ms8607.HumidityResolution`

Options for *pressure\_resolution*

**class** `adafruit_ms8607.MS8607` (*i2c\_bus*)

Library for the MS8607 Pressure, Temperature and Humidity Sensor

**Parameters** `i2c_bus` (*I2C*) – The I2C bus the MS8607 is connected to.

### Quickstart: Importing and using the MS8607 temperature sensor

Here is an example of using the *MS8607* class. First you will need to import the libraries to use the sensor

```
import board
import adafruit_ms8607
```

Once this is done you can define your `board.I2C` object and define your sensor object

```
i2c = board.I2C() # uses board.SCL and board.SDA
ms = adafruit_ms8607.MS8607(i2c)
```

Now you have access to the *pressure*, *temperature* and *humidity* using the *pressure*, *temperature* and *relative\_humidity* attributes

```
temperature = ms.temperature
relative_humidity = ms.relative_humidity
pressure = ms.pressure
```

### **humidity\_resolution**

The humidity sensor’s measurement resolution

### **initialize()**

Configure the sensors with the default settings and state. For use after calling *reset()*

### **pressure**

The current barometric pressure in hPa

### **pressure\_and\_temperature**

Pressure and Temperature, measured at the same time

**pressure\_resolution**

The measurement resolution used for the pressure and temperature sensor

**relative\_humidity**

The current relative humidity in % rH

**reset ()**

Reset the sensor to an initial unconfigured state

**temperature**

The current temperature in degrees Celcius

**class** adafruit\_ms8607.**PressureResolution**

Options for *pressure\_resolution*

## CHAPTER 7

---

### Indices and tables

---

- `genindex`
- `modindex`
- `search`
