CircuitPython module for use with the Adafruit ATSAMD09 seesaw.

# CHAPTER 1

---

## Dependencies

---

This driver depends on:

- [Adafruit CircuitPython](#)
- [Bus Device](#)

Please ensure all dependencies are available on the CircuitPython filesystem. This is easily achieved by downloading the [Adafruit library and driver bundle](#).

## CHAPTER 2

---

### Usage Example

---

See `examples/seesaw_simpletest.py` for usage example.

## CHAPTER 3

---

### Contributing

---

Contributions are welcome! Please read our [Code of Conduct](#) before contributing to help this project stay welcoming.

## CHAPTER 4

---

### Building locally

---

To build this library locally you'll need to install the `circuitpython-build-tools` package.

```
python3 -m venv .env
source .env/bin/activate
pip install circuitpython-build-tools
```

Once installed, make sure you are in the virtual environment:

```
source .env/bin/activate
```

Then run the build:

```
circuitpython-build-bundles --filename_prefix adafruit-circuitpython-seesaw --library_
↳location .
```

### 4.1 Sphinx documentation

Sphinx is used to build the documentation based on rST files and comments in the code. First, install dependencies (feel free to reuse the virtual environment from above):

```
python3 -m venv .env
source .env/bin/activate
pip install Sphinx sphinx-rtd-theme
```

Now, once you have the virtual environment activated:

```
cd docs
sphinx-build -E -W -b html . _build/html
```

This will output the documentation to `docs/_build/html`. Open the `index.html` in your browser to view them. It will also (due to `-W`) error out on any warning like Travis will. This is a good way to locally verify it will pass.

## 5.1 Simple test

Ensure your device works with this simple test.

Listing 1: examples/seesaw\_simpletest.py

```
1 # Simple seesaw test using an LED attached to Pin 15.
2 #
3 # See the seesaw Learn Guide for wiring details:
4 # https://learn.adafruit.com/adafruit-seesaw-atsamd09-breakout?view=all#circuitpython-wiring-and-test
5 import time
6
7 from board import SCL, SDA
8 import busio
9 from adafruit_seesaw.seesaw import Seesaw
10
11 i2c_bus = busio.I2C(SCL, SDA)
12
13 ss = Seesaw(i2c_bus)
14
15 ss.pin_mode(15, ss.OUTPUT)
16
17 while True:
18     ss.digital_write(15, True) # turn the LED on (True is the voltage level)
19     time.sleep(1)             # wait for a second
20     ss.digital_write(15, False) # turn the LED off by making the voltage LOW
21     time.sleep(1)
```

## 5.2 Other Examples

Here are some other examples using the Seesaw library

Listing 2: examples/seesaw\_crickit\_test.py

```

1  from board import SCL, SDA
2  import busio
3  from adafruit_seesaw.seesaw import Seesaw
4  from adafruit_seesaw.pwmout import PWMOut

## 5.3 seesaw

An I2C to whatever helper chip.

- Author(s): Dean Miller

### 5.3.1 Implementation Notes

#### Hardware:

- Adafruit ATSAM09 Breakout with seesaw (Product ID: 3657)

#### Software and Dependencies:

- Adafruit CircuitPython firmware for the ESP8622 and M0-based boards: <https://github.com/adafruit/circuitpython/releases>
- Adafruit's Bus Device library: [https://github.com/adafruit/Adafruit\\_CircuitPython\\_BusDevice](https://github.com/adafruit/Adafruit_CircuitPython_BusDevice)

**class** `adafruit_seesaw.seesaw.Seesaw` (*i2c\_bus*, *addr=73*, *drdy=None*)  
Driver for Seesaw i2c generic conversion trip

#### Parameters

- **i2c\_bus** (*I2C*) – Bus the SeeSaw is connected to
- **addr** (*int*) – I2C address of the SeeSaw device

**sw\_reset** ()  
Trigger a software reset of the SeeSaw chip
