6.10	adafruit_seesaw.robohat - Pin definition for RoboHAT	24
6.11	adafruit_seesaw.samd09 - Pin definition for Adafruit SAMD09 Breakout with seesaw	25
6.12	adafruit_seesaw.tftshield18 - Pin definitions for 1.8" TFT Shield V2	25
7	Indices and tables	27
	Python Module Index	29
	Index	31

CircuitPython module for use with the Adafruit ATSAMD09 seesaw.

CHAPTER 1

Dependencies

This driver depends on:

- Adafruit CircuitPython
- Bus Device

Please ensure all dependencies are available on the CircuitPython filesystem. This is easily achieved by downloading the [Adafruit library and driver bundle](#).

CHAPTER 2

Installing from PyPI

On supported GNU/Linux systems like the Raspberry Pi, you can install the driver locally [from PyPI](#). To install for current user:

```
pip3 install adafruit-circuitpython-seesaw
```

To install system-wide (this may be required in some cases):

```
sudo pip3 install adafruit-circuitpython-seesaw
```

To install in a virtual environment in your current project:

```
mkdir project-name && cd project-name  
python3 -m venv .env  
source .env/bin/activate  
pip3 install adafruit-circuitpython-seesaw
```

CHAPTER 3

Usage Example

See examples/seesaw_simpletest.py for usage example.

CHAPTER 4

Contributing

Contributions are welcome! Please read our [Code of Conduct](#) before contributing to help this project stay welcoming.

CHAPTER 5

Documentation

For information on building library documentation, please check out [this guide](#).

CHAPTER 6

Table of Contents

6.1 Simple test

Ensure your device works with this simple test.

6.3 `adafruit_seesaw.seesaw`

An I2C to whatever helper chip.

- Author(s): Dean Miller

6.3.1 Implementation Notes

Hardware:

- Adafruit ATSAMD09 Breakout with seesaw (Product ID: 3657)

Software and Dependencies:

- Adafruit CircuitPython firmware: <https://circuitpython.org/>
- or Adafruit Blinka: <https://circuitpython.org/blinka>
- Adafruit's Bus Device library: https://github.com/adafruit/Adafruit_CircuitPython_BusDevice

`class adafruit_seesaw.Seesaw(i2c_bus, addr=73, drdy=None)`

Driver for Seesaw i2c generic conversion trip

Parameters

- `i2c_bus` (`I2C`) – Bus the SeeSaw is connected to
- `addr` (`int`) – I2C address of the SeeSaw device
- `drdy` (`DigitalInOut`) – Pin connected to SeeSaw's 'ready' output

`analog_read(pin)`

Read the value of an analog pin by number

`analog_write(pin, value)`

Set the value of an analog output by number

`digital_read(pin)`

Get the value of an input pin by number

`digital_read_bulk(pins, delay=0.008)`

Get the values of all the pins on the 'A' port as a bitmask

`digital_read_bulk_b(pins, delay=0.008)`

Get the values of all the pins on the 'B' port as a bitmask

`digital_write(pin, value)`

Set the value of an output pin by number

`digital_write_bulk(pins, value)`

Set the mode of pins on the 'A' port as a bitmask

`digital_write_bulk_b(pins, value)`

Set the mode of pins on the 'B' port as a bitmask

`eeprom_read8(addr)`

Read a single byte directly to the device's EEPROM

`eeprom_write(addr, buf)`

Write multiple bytes directly to the device's EEPROM

`eeprom_write8(addr, val)`

Write a single byte directly to the device's EEPROM

```

get_i2c_addr()
    Return the device's I2C address stored in its EEPROM

get_options()
    Retrieve the 'options' word from the SeeSaw board

get_temp()
    Read the temperature

get_version()
    Retrieve the 'version' word from the SeeSaw board

moisture_read()
    Read the value of the moisture sensor

pin_mode(pin, mode)
    Set the mode of a pin by number

pin_mode_bulk(pins, mode)
    Set the mode of all the pins on the 'A' port as a bitmask

pin_mode_bulk_b(pins, mode)
    Set the mode of all the pins on the 'B' port as a bitmask

read(reg_base, reg, buf, delay=0.008)
    Read an arbitrary I2C register range on the device

read8(reg_base, reg)
    Read an arbitrary I2C byte register on the device

set_GPIO_interrupts(pins, enabled)
    Enable or disable the GPIO interrupt

set_i2c_addr(addr)
    Store a new address in the device's EEPROM and reboot it.

set_pwm_freq(pin, freq)
    Set the PWM frequency of a pin by number

sw_reset()
    Trigger a software reset of the SeeSaw chip

touch_read(pin)
    Read the value of a touch pin by number

uart_set_baud(baud)
    Set the serial baudrate of the device

write(reg_base, reg, buf=None)
    Write an arbitrary I2C register range on the device

write8(reg_base, reg, value)
    Write an arbitrary I2C byte register on the device

```

6.4 adafruit_seesaw.crickit - Pin definition for Adafruit CRICKIT

6.5 adafruit_seesaw.analoginput

```

class adafruit_seesaw.analoginput.AnalogInput(seesaw, pin)
    CircuitPython-compatible class for analog inputs

```

This class is intended to be a compatible subset of `analogio.AnalogIn`

Parameters

- `seesaw` (`Seesaw`) – The device
- `pin` (`int`) – The pin number on the device

`reference_voltage`

The reference voltage for the pin

`value`

The current analog value on the pin, as an integer from 0..65535 (inclusive)

6.6 `adafruit_seesaw.digitalio`

`class adafruit_seesaw.digitalio.DigitalIO(seesaw, pin)`

CircuitPython-compatible class for digital I/O pins

This class is intended to be a compatible subset of `digitalio.DigitalInOut`.

Due to technical limitations, PULL_DOWNs are not supported.

Parameters

- `seesaw` (`Seesaw`) – The device
- `pin` (`int`) – The pin number on the device

`direction`

Retrieve or set the direction of the pin

`drive_mode`

Retrieve or set the drive mode of an output pin

`pull`

Retrieve or set the pull mode of an input pin

`switch_to_input` (`pull=None`)

Switch the pin to input mode

`switch_to_output` (`value=False, drive_mode=<sphinx.ext.autodoc.importer._MockObject object>`)

Switch the pin to output mode

`value`

Retrieve or set the value of the pin

6.7 `adafruit_seesaw.keypad`

`class adafruit_seesaw.keypad.KeyEvent (num, edge)`

Holds information about a key event in its properties

Parameters

- `num` (`int`) – The number of the key
- `edge` (`int`) – One of the EDGE properties of `adafruit_seesaw.keypad.Keypad`

`class adafruit_seesaw.keypad.Keypad (i2c_bus, addr=73, drdy=None)`

On compatible SeeSaw devices, reads from a keypad.

Parameters

- **i2c_bus** (*I2C*) – Bus the SeeSaw is connected to
- **addr** (*int*) – I2C address of the SeeSaw device
- **drdy** (*DigitalInOut*) – Pin connected to SeeSaw's 'ready' output

EDGE_FALLING = 2

Indicates that the key was recently pressed

EDGE_HIGH = 0

Indicates that the key is currently pressed

EDGE_LOW = 1

Indicates that the key is currently released

EDGE_RISING = 3

Indicates that the key was recently released

count

Retrieve or set the number of keys

interrupt_enabled

Retrieve or set the interrupt enable flag

read_keypad(num)

Read data from the keypad

Parameters num (*int*) – The number of bytes to read**set_event(key, edge, enable)**

Control which kinds of events are set

Parameters

- **key** (*int*) – The key number
- **edge** (*int*) – The type of event
- **enable** (*bool*) – True to enable the event, False to disable it

6.8 adafruit_seesaw.neopixel

adafruit_seesaw.neopixel.GRB = (1, 0, 2)

Green Red Blue

adafruit_seesaw.neopixel.GRBW = (1, 0, 2, 3)

Green Red Blue White

class adafruit_seesaw.NeoPixel(seesaw, pin, n, *, bpp=3, brightness=1.0, auto_write=True, pixel_order=None)

Control NeoPixels connected to a seesaw

Parameters

- **seesaw** (*Seesaw*) – The device
- **pin** (*int*) – The pin number on the device
- **n** (*int*) – The number of pixels
- **bpp** (*int*) – The number of bytes per pixel

- **brightness** (`float`) – The brightness, from 0.0 to 1.0
- **auto_write** (`bool`) – Automatically update the pixels when changed
- **pixel_order** (`tuple`) – The layout of the pixels. Use one of the order constants such as RGBW.

__setitem__ (`key, color`)
Set one pixel to a new value

brightness
Overall brightness of the pixel

fill (`color`)
Set all pixels to the same value

show()
Update the pixels even if auto_write is False

```
adafruit_seesaw.neopixel.RGB = (0, 1, 2)
Red Green Blue
```

```
adafruit_seesaw.neopixel.RGBW = (0, 1, 2, 3)
Red Green Blue White
```

6.9 adafruit_seesaw.pwmout

class `adafruit_seesaw.pwmout.PWMOut` (`seesaw, pin`)
A single seesaw channel that matches the `PWMOut` API.

duty_cycle
16-bit value that dictates how much of one cycle is high (1) versus low (0). 65535 (0xffff) will always be high, 0 will always be low, and 32767 (0x7fff) will be half high and then half low.

fraction
Expresses duty_cycle as a fractional value. Ranges from 0.0-1.0.

frequency
The overall PWM frequency in Hertz.

6.10 adafruit_seesaw.robohat - Pin definition for RoboHAT

class `adafruit_seesaw.robohat.MM1_Pinmap`
This class is automatically used by `adafruit_seesaw.seesaw.Seesaw` when a RoboHAT board is detected.

It is also a reference for the capabilities of each pin.

analog_pins = (35, 34)
The pins capable of analog output

pwm_pins = (16, 17, 18, 19, 11, 10, 9, 8, 40, 41, 42, 43)
The pins capable of PWM output

pwm_width = 16
The effective bit resolution of the PWM pins

touch_pins = (7, 6, 5, 4)
The pins capable of touch input

6.11 `adafruit_seesaw.samd09` - Pin definition for Adafruit SAMD09 Breakout with seesaw

```
class adafruit_seesaw.samd09.SAMD09_Pinmap
```

This class is automatically used by `adafruit_seesaw.seesaw.Seesaw` when a SAMD09 Breakout is detected.

It is also a reference for the capabilities of each pin.

```
analog_pins = (2, 3, 4, 5)
```

The effective bit resolution of the PWM pins

```
pwm_pins = (4, 5, 6, 7)
```

No pins on this board are capable of touch input

```
pwm_width = 8
```

The pins capable of PWM output

6.12 `adafruit_seesaw.tftshield18` - Pin definitions for 1.8" TFT Shield V2

```
class adafruit_seesaw.tftshield18.Buttons(right, down, left, up, select, a, b, c)
```

```
static __new__(_cls, right, down, left, up, select, a, b, c)
```

Create new instance of Buttons(right, down, left, up, select, a, b, c)

```
__repr__()
```

Return a nicely formatted representation string

a

Alias for field number 5

b

Alias for field number 6

c

Alias for field number 7

down

Alias for field number 1

left

Alias for field number 2

right

Alias for field number 0

select

Alias for field number 4

up

Alias for field number 3

```
class adafruit_seesaw.tftshield18.TFTShield18(i2c_bus=None, addr=46)
```

buttons

Return a set of buttons with current push values

set_backlight (*value*)

Set the backlight on

set_backlight_freq (*freq*)

Set the backlight frequency of the TFT Display

tft_reset (*rst=True*)

Reset the TFT Display
